Linux

All the servers used in the cluster are using GNU/Linux, and more specifically CentOS 7.

Having at least a basic knowledge of using Linux, and ideally a terminal, is a pre-requisite for using our clusters. You are also expected to be able to write a simple Bash/Shell script, as this is needed to create the *sbatch* script.

Explaining how to use Linux is out of the scope of this documentation, but you can find plenty of tutorials and explanation on the internet.

If you never used Linux, you can start with those links to get some Linux and Bash tutorials :

- http://linuxcommand.org (highly recommanded)
- http://linuxtutorial.todolistme.net/
- http://vic.gedris.org/Manual-ShellIntro/1.2/ShellIntro.pdf
