Go to the VM

Check if you have snapshots on the VM Go to the snapshot tab and check is the status is "No snapshots to show" You can't extend disk if snapshot are present you need to delete the snapshot first !

The resize is not available when the vm is ON

Before changing hardware configuration you need to turn of the VM

You can turn off by using SSH or the web interface :

Turn off option :

- "Send the power off signal" will send a signal to the VM to do a proper shutdown
- "Power off the machine" will power off the machine similar than removing the computer power. This should be use only if the "Send the power off signal" don't work.

This action will power off this Virtual Machine. The Virtual Machine will remain in the poweroff state, and can be powered on later

You can send the power off signal to the Virtual Machine (this is equivalent to execute the command from the console). If that doesn't affect your Virtual Machine, try to Power off the machine (this is equivalent to pressing the power off button in a physical computer).

⚡ Power off the machine   ⏻ Send the power off signal   **Power off**

The status is now powering off :

🔄 **demodeb2** ✏️

POWERING OFF ⬛

🖥️ x1 - 2GB - t-cloud-debian10

🌐 10.40.41.18, fe80::aff:fe28:2912

👤 huwilers   9m ago - ID: 194

Press the refresh button to refresh the status until the status is OFF :

Resize

The vm may briefly turn on to apply the modification and the interface may show the vm running but it's not true. Click on the refresh button

Now you can turn on the vm by pressing the start button

The vm will be in status "Deploying" it's normal

Just click the refresh button to get the new status
