

Archive reload

Description

The reload jobs offers the capability to rebuild an environment from the archives only.

Prerequisites

- The environment must be well configured and running.
- The *archival storage* database must be empty.
- The archives must be copied in the location defined in the configuration.

Procedure

1. Run the *RELOAD* job to reload archives (i.e. AIP) ⇒ The archives are available for searching & downloading
2. Run the *RELOAD_INGEST* job to reload SIP & deposits ⇒ The archive are updatable

see [Preservation Job Parameters](#)
